Gallicomfort

Turkey insemination bench

*It's all about
comfort!*

What is Gallicomfort?

Gallicomfort is a turkey insemination bench designed by an ergonomic specialist to help improve both human and animal welfare, while maintaining productivity levels.

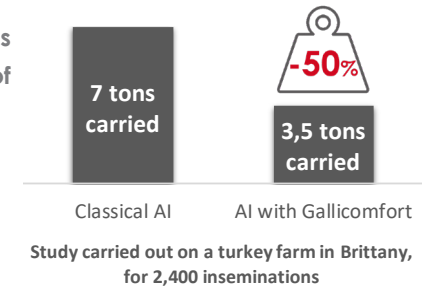

- 1 Turkeys are guided up an access ramp to the insemination bench.
- 2 Breeding crew members transfer hens, one at a time, at lifting height, to the inseminator by sliding them across the bench's table.
- 3 The inseminator, sitting on a stool, controls the hen by pressing the foot pedal. This engages the leg holder and rollers to open the hen's oviduct.
- 4 The ergonomic arm rest allows the inseminator to easily guide his arm from the MRA to the hen with a filled semen straw for insemination.
- 5 The inseminator then presses the pedal again to release the hen. A ramp positioned below the bench allows for a gentle release.

Why choose Gallicomfort?

Put your staff's well-being first

Gallicomfort is designed to improve your staff's working conditions and reduce the risk of musculoskeletal disorders:

- Turkeys arrive at lifting height (no bending)
- Carry weight reduced by half
- Ergonomic arm rest
- Adjustable stool

Keep your efficiency in mind

Maintain high productivity levels

- 700 turkeys / hour with a team of 5 people

Train staff quickly

- Train new employees in 1 to 2 weeks

Make animal welfare a priority

Gallicomfort is designed to improve both employees and animal welfare.

- Reduce the use of small pens, allowing for hens to move around freely.
- Gentle handling: turkeys are softly slid onto the bench for insemination. They are released calmly down a ramp after insemination.
